

ASL and English Linguistics

1. In English, pronouns can be marked with all of the following grammatical information except which one?
 - a. Gender
 - b. Number
 - c. Location
 - d. Reflexive

2. Which of the following would not constitute an appropriate use of mouthing in ASL?
 - a. Lexical accompaniment to certain signs such as PAH, CHA, NOT-YET, and FINISH.
 - b. Adverbial marking such as “carefully,” “carelessly,” and “recently.”
 - c. Mouthing to distinguish words that are manually homophonous in ASL such as “team,” “group,” “family,” and “tribe.”
 - d. Mouthing accompanying fingerspelled names.

3. Which of the following is not true of ASL?
 - a. ASL is a Creole of French Sign Language and a number of indigenous sign languages pre-existing in the United States in the 1800s.
 - b. ASL uses facial expressions to mark adverbial information and to distinguish various sentence level grammatical constructions.
 - c. ASL can indicate both direct speech and direct action using role shifts.
 - d. ASL verbs are more likely to indicate morphological agreement with subjects than with objects.

4. All but one of the following is true of American Sign Language:
 - a. Relative clauses are marked with a tensed cheek facial expression and the relative noun phrase can remain inside the clause.
 - b. Relative clauses like THAT, WHICH, and WHO can occur at the end of the relative clause and are marked with a tensed cheek facial expression that also spreads over the rest of the relative clause.
 - c. While the basic word order is a subject-verb-object, the noun phrase corresponding to the ground (the larger, more stationary referent in a verb of motion or location), is usually moved to the beginning of the sentence and marked as a topic.
 - d. Who, what where type question words can appear in their original position, at the end, or at the beginning and end and a characteristic brow furrow is also associated with this construction.

5. All but which of the following signs have a corresponding fingerspelled loan sign in some dialects of ASL:
 - a. EARLY
 - b. SOON
 - c. WHAT
 - d. ACT

6. A semantic classifier in ASL is:
 - a. A bound morpheme that indicated the location of a referent by occupying the same position in the signing space.
 - b. A verb that can move around in the signing space to depict actions like flying a plane or driving a car.
 - c. A handshape that specifies the size and shape of some object.
 - d. An ASL morpheme that functions like a pronoun in defining a class of object that shares some physical or abstract characteristic.

7. Fingerspelled loan words in ASL arose as a result of all but which of the following:
- An attempt on the part of Deaf signers to exclude hearing signers from understanding and participating in exclusive conversations.
 - The cultural maintenance of ethnic boundaries in the Deaf Community.
 - The accommodation of Deaf native signers to the receptive needs of English speakers in contact communication.
 - The tendency for all conventionalized forms to conform to the morpheme structure constraints of the primary language.
8. Facial expressions in American Sign Language are used for all of the following but
- As adverbial markers.
 - As a means of caricature.
 - As a back channeling mechanism.
 - As lexical affect markers.
9. In American Sign Language, pronouns can be marked with all of the following grammatical information except which feature?
- Possessive
 - Reflexive
 - Gender
 - Number
